- C - Minutes hand treated with luminescent material
- D - Center second hand treated with logo Anonimo
- E - Luminescent blue or green color at night
- F - Luminescent dot
- G - Diving Bezel
- H - Date display

LOCKING THE CROWN (A-Pos.1)

To fully lock, press the crown firmly against the case while turning clockwise until completely seated. In this position the watch is water-resistant to its rated depth and its water resistance is guaranteed.

IMPORTANT: Always fully lock the crown after winding or setting the watch to ensure water resistance.

WINDING THE WATCH (A-Pos.2)

Unscrew the crown by turning it anticlockwise. Once unscrewed, turn the crown clockwise 15-20 rotations to fully wind the movement.

NOTE: When the watch has not been worn or wound for more than 35 hours, it is recommended that it should be rewound with a few clockwise turns on the crown, to ensure sufficient power reserve and accurate operation. In this position water resistance is not guaranteed.

SETTING THE TIME (A-Pos.3)

Pull out the crown to the first detent position. Turn the crown clockwise to set the date.

IMPORTANT: Never change the date between 8 p.m. and 2 a.m. Doing so may damage the movement. It is during this time that the date mechanism automatically advances. In this position water resistance is not guaranteed.

SETTING THE TIME (A-Pos.4)

Pull out the crown completely to the second click. Turn the crown clockwise to set the desired time. In this position water resistance is not guaranteed. After setting the time, push in the crown completely, pressing it firmly against the case. Turn clockwise to fully lock as described in A-Pos.1.
